

**COMBINATION BASED ON MICROFIBRILS AND MINERAL
PARTICLES, PREPARATION AND USES**

Abstract of the Disclosure

5 The invention concerns an association in dry form, comprising: microfibrils
10 whereof the mean diameter is less than 0.8 μm ; and at least one mineral particle. It
also concerns a method for preparing said association, which consists in preparing
a suspension comprising the microfibrils and the mineral particles, which are then
dried. Finally, the invention concerns the use of such an association in
compositions comprising (co)polymers including elastomers, thermoplastic
15 polymers, their alloys and mixtures.
